

OWS Electric Aerator Steel Cabinet EAU0199

The OWS Electric Aerator Steel Cabinet is designed to protect your electric aerator from the snow, rain, sleet and other inclement weather that can shorten the life expectancy of your unit. It has a built in fan to circulate air and to help keep your aerator from overheating.

Use Instructions:

- Mount cabinet with either the post mounting screws or 4 adjustable feet (included).
- Install your electric aerator inside of the cabinet and run your airline down through one of the four airline exit holes. If running multiple airlines, you can split the airflow inside of the cabinet using a manifold or you can split the airline closer to the pond using a 2-way or 3-way selector valve.
- Please insure adequate airflow around the cabinet so the electric aerator can stay cool.
- Clean the air vents and check for any obstructions at least once or twice a year.
